Limited Places Available

Take your TAD skills to the next level and expand your treatment options with this full day course of lectures and practicals.

Participants will develop practical skills in TAD placement and positioning, effective laboratory communication, digital appliance design, indirect anchorage concepts, and MARPE protocols, while learning how to incorporate contemporary digital workflows into everyday clinical practice.

Combining evidence-based lectures, interactive clinical case discussions, and hands-on exercises, the programme provides a comprehensive overview of modern TAD-supported orthodontic treatment. By the end of the course, attendees will have gained practical protocols that can be confidently integrated into daily practice.

Course Topics Include:

- Laboratory transfer techniques
- Applications of tomas® abutments & eyelets
- Indirect anchorage
- 3D metal printed appliances
- MARPE - all you need to know

Hands-on Practical:

Participants will gain practical experience with tomas® components and contemporary TAD protocols through guided exercises including anterior & posterior palatal TAD placement, transfer techniques, TAD-First and TAD-Last protocols.
