The Complete System For All Indications

The tomas system has been one of the leading skeletal anchorage systems for many years and it is now the No. 1 system in the US. Users value its easy handling and high reliability. With the tomas SD (Self-Drilling) pin and tomas EP (Elastic Palatal) pin and a selection of abutments for direct and indirect coupling, all requirements for a modern system have been taken into account. Be it distalization, mesialization, intrusion, palatal expansion or indirect anchorage: tomas has something to offer both the beginner and the professional in skeletal anchorage systems.

Testimonial

"I have been using the TOMAS pin in my clinical practice for more than 10 years and we now also use the system in our hospital and postgraduate training programme. The attraction of the TOMAS pin and accessories is both the simplicity and versatility of the system. To support the product I like the ongoing educational opportunities and support provided covering topics such as the importance of the pin design, the relevance of cortical bone thickness, site selection for insertion and when to pre-drill, and appropriate torque at insertion to minimize risk of failure."

Mr Trevor Hodge,
Consultant Orthodontist, Leeds Dental Institute

GC Ortho Connect

Light Cure Orthodontic Adhesive - Your One Step System!

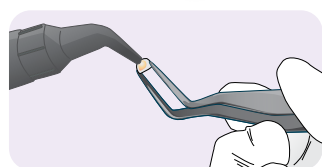

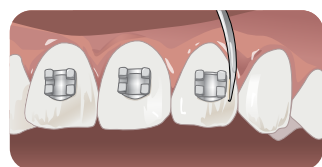

Reduce time and costs with Ortho Connect. There is no need to apply primer on the tooth as it's already incorporated into the paste, simply etch and dry ready for bonding!

Ortho Connect provides the perfect viscosity for bonding brackets and tubes along with excellent bond strength and reduced bond failure.

2 x 2.9g syringes, 4 x tips,
2 x protective covers

CODE	LIST PRICE
T90-1100-0000	£79.90

NO PRIMER NEEDED!

When using GC Ortho Connect, no primer is necessary, since it is already incorporated into the adhesive, thus creating a simplified bonding process that reduces costs.

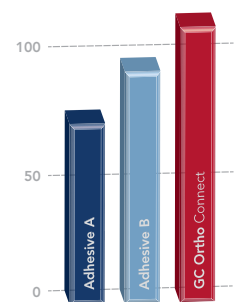

The adhesive's ideal viscosity insures reliable and precise bracket placement.

An ergonomic syringe guarantees accurate dosage, providing a practical and economic adhesive solution. The syringe's cap prevents dry out and thus decreasing potential waste.

Excess adhesive is detected by a black light, which aids in fast and efficient cleanup.

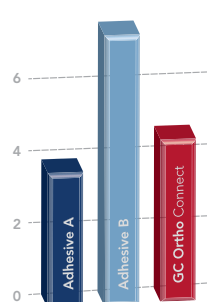

20% DISCOUNT

Highly Resistant

Excellent Bond Strength

Featuring superior flexural strength - fundamental in supporting mastication pressure.

Reduced Bond Failure

The low elasticity component of GC Ortho Connect, compared to other composites in the industry, allows for high impact resistance without bond failure.

LEGEND mini Rhodium

Aesthetic Stainless Steel Brackets

The perfect bracket choice for your private patients!

Now you can offer your patients a bracket with the durability of stainless steel and a 'white metal' appearance that blends beautifully with enamel.

Legend mini Rhodium is precision manufactured in Japan, with a CNC process providing the most accurate slot of any bracket available so the bracket values are precisely expressed. The anatomically correct mesh base makes them easy to place and ensures maximum retention on the tooth. Match with rhodium aesthetic wires for a completely discreet look.

With Rhodium

Without Rhodium

(Choose from .014" or .016" Upper or Lower)

"I've been so pleased with both the aesthetics and performance of these brackets. They were easy to place, I've had no breakages and the treatment results in the first 6 weeks have been fantastic. The high quality finish and smoothness of the bracket provides improved patient comfort while the matt, translucent appearance appeals to patients with cosmetic concerns whilst providing all the durability benefits of a metal bracket. I will definitely be using them again in the future."

Dr. Sian Walley

"I'm so happy with the results so far from my braces. Hardly anyone at work has noticed I've got them and I feel less self-conscious than if I'd had the shiny metal ones. They are really smooth and comfortable and I haven't had any breakages"

Eloise, Patient

to view a demo video

"This kit, for me, has provided a safe way to carry out IPR. It is a very efficient tool and I would highly recommend it."

Dr. Kunle Aluko

"The Swingle has been a fantastic addition to my orthodontic tool kit - I'm not sure how I lived without it! I can now carry out IPR so much quicker and more effectively mechanically than I could by hand.

The Swingle has brought me to realise I wasn't carrying out sufficient IPR by hand - likely due to the huge amount of time it would take to do anything over 0.2mm."

Dr. Sian Walley

Central Ortho-Strips

Our popular Ortho-Strips are now available with diamond coating on the central part of the strip only. These Central Strips allow the highest precision in the approximal reduction, finishing and polishing of enamel, respecting the original morphology and dental tissues.

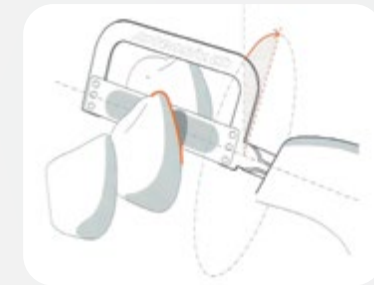

They provide the safest form of IPR avoiding the creation of a step on entry due to the non-diamond coated lower edge of the strip and prevention of dentine abrasion.

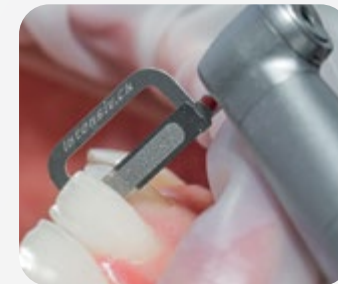

Unique Patented design

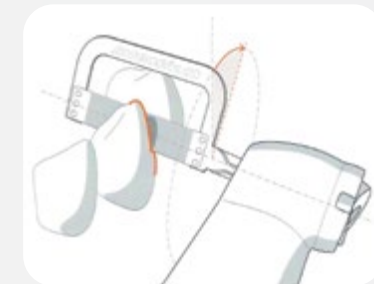

- Easier entry into the interdental contact points
- Conservation of the original morphology of the middle part of the tooth

demo video

- Prevention of cervical steps
- No unnecessary removal of dentine
- No dentine hypersensitivity

esmail eruptor™

A novel method to aid eruption of partially erupted teeth within one visit. Partially erupted teeth can be bonded without the need for full eruption.

Fully erupted teeth in only 1 visit

- The Esmail Eruptor eyelet is offset from the bonding pad allowing the tooth to be bonded as soon as it erupts but still allows full activation of the NiTi wire.
- No need for constant repositioning of the bracket which only allows 1 - 2mm of eruption.
- 80-gauge mesh base.
- Ideal for canines and second premolars.

PRODUCT	CODE	LIST PRICE
Single Tube (Pk 10)	JB-500-00	£29.95
Double Tube (Pk 10)	JB-500-01	£29.95

Single tube allows full activation in one visit.

Double tube allows sequential activation, perfect for those high canines which may need to be moved in stages.

"We just wanted to let you know how much we are enjoying using the Esmail Eruptors. A complete stroke of genius and saves so much time with multiple repositioning of brackets. Excellent invention!"

Emily Smithard
Consultant and Specialist Orthodontist

Open space to allow impacted canine to erupt.

Esmail Eruptor is bonded and 0.014" wire ligated.

6 weeks later and the canine has fully erupted.

Designed by a British Orthodontist

ABOUT THE INVENTOR

I very much enjoy efficient orthodontic treatment, no patient wants their braces to be on longer than they need to and I am always looking at ways to improve the efficiency of my treatment.

One clinical scenario I was getting really frustrated with was partially erupted teeth either canine teeth or second premolars, where only the tip of the enamel has just erupted. I have tried bending an offset and adding elastic chain to the eyelet or placing the wire above the bracket, but all options were slow and time consuming.

The issue is the ideal position for bracket placement was still under the gingivae, I therefore decided to invent an offset eyelet to allow much greater activation of the NiTi wire to allow much quicker eruption. I hope you find this product as useful in your clinical practice as I have found it in mine.
